SW	Southwest sector of network.		

The Central Ohio Raingage Network (CORN) consists of several municipal and N.O.A.A. gages combined with gages of employees or friends of the following organizations: EMH&T, Inc.; ODNR; Dodson-Stilson Assoc.; USGS/Water Resources Division; Myers-Schmalenberger, and Medex, Inc.

SUMMARY INFORMATION --- August 1995

Precipitation was significantly above normal over a large portion of the Central Ohio area during August, in spite of a rather dry period during the last 3 weeks of the month. August totals ranged from 3.50 inches near Dublin Coffman High School to 11.20 inches just north of Pataskala. Sector averages for the month were as follows: NW = 5.52 inches; NE = 7.73 inches; SE = 7.92 inches, and SW = 5.47 inches. The 4-sector average for August was 6.66 inches; normal precipitation at Port Columbus for August is 3.72 inches. Port Columbus recorded measureable rainfall on only 10 days during the month, but its monthly total of 7.56 inches ranks as the 3rd wettest August of record in Columbus. The most significant storm to affect the entire Central Ohio area occurred on August 4-6, as the remnants of Hurricane Erin passed over the region. (See the "Special Report - Storms of August 4-6 and August 8, 1995" on pages 11-12). Other more localized storms to produce more than an inch of rain occurred on August 8, 11, and 17-18. No measureable rainfall was recorded by any of our volunteers during the period of August 22-31. It was also one of the warmest Augusts of record, as daily high temperatures reached into the 90's on 15 days during the month.

The 24.71 inches of rainfall recorded at Port Columbus during the period of May-August 1995 ranks second on the list of all-time wettest summers in Columbus. The official record of 25.56 inches of rainfall was set at Port Columbus during the summer of 1958. About half of our volunteers recorded more than the record 25.56 inches of rain during the period of May through August 1995; a map showing available summer rainfall totals for our network is presented on page 13. Sector averages for the May-August period were as follows: NW = 24.03"; NE = 26.69"; SE = 26.64", and SW = 23.75". The 4-sector average for that 4-month period was 25.28"; normal precipitation at Port Columbus for the period of May-August is 16.00 inches. In general, the record-breaking rainfalls occurred over portions of southeastern Delaware County, central and north-eastern Franklin County, western Licking and northwestern Fairfield Counties.

Precipitation for calendar year 1995 is significantly above normal over the entire Central Ohio area. Annual totals through August range from 29.12 inches near Dublin Coffman High School to 48.23 inches in Pickerington. Sector averages are as follows: NW = 35.54"; NE = 39.09"; SE = 38.98", and SW = 34.70". The 4-sector average for the year to date is 37.07 inches; normal precipitation at Port Columbus for the period of January through August is 26.90 inches. The pool levels in Columbus area reservoirs peaked either on the 9th or 10th of the month, then generally dropped gradually in response to the heat and dry conditions experienced during the latter part of the month. The end-of-month pool levels were as follows: O'Shaughnessy = 848.64 ft.; Hoover = 892.19 ft. (2.19 ft. above the maximum rated capacity for water supply), and Alum Creek = 888.04 ft. (0.04 ft. above the normal summer pool level). The Palmer Drought Severity Index for the Central Ohio area at the end of August was + 0.5 (incipient moist spell), which is basically unchanged from last month.

NOTES:

=====

1. Daily totals shown on pages 2-8 of this report are for those volunteers who report directly to Bob Davis of Evans, Mechwart, Hambleton, and Tilton, Inc. (EMH&T), Consulting Engineers. For daily totals of other gages in network, contact Dave Cashell at ODNR / Division of Water.
2. Precipitation measurements shown on pages 2-8 are typically taken from plastic rain gages of at least 5-inch capacity.
3. Sectors are based on direction of gages from Broad and High Streets.
4. CORRECTION: In the June 1995 report, on page 10, Summary Information text, 2nd paragraph, 2nd line, replace "July 26" and "July 27" with "June 26" and "June 27", respectively.
5. Data for Gages 72, 82, 94 and 99 were not available at time of publication.
