ABBREVIATIONS & SYMBOLS USED IN THIS REPORT:

=====

- T Trace, an amount too small to measure. a Reading taken at 8:15 p.m.
- M Missed reading; no data available.
- * Missed reading; amount included in following measurement.
- e Estimated amount based on data from nearby gages.
- ? Questionable value based on data from nearby gages.
- NW Northwest sector of network.
- NE Northeast sector of network.
- SE Southeast sector of network.
- SW Southwest sector of network.
- ELEV Elevation, in feet above mean sea level.
- SECT Geographic sector of network, based on direction of equipment from Broad & High St.

The Central Ohio Raingage Network (CORN) consists of several municipal and N.O.A.A. gages combined with gages of employees or friends of the following organizations: EMH&T, Inc.; ODNR; Dodson-Stilson Assoc.; USGS/Water Resources Division; Myers-Schmalenberger, and the City of Delaware.

SUMMARY INFORMATION --- August 1996

Precipitation during August 1996 was significantly below normal over nearly all of the Central Ohio area. Monthly totals ranged from 0.15 of an inch near Woodside Green Park in Gahanna to 3.15 inches in Utica. A majority of our observers recorded between 0.7 and 1.3 inches of rainfall during the month. Sector averages for the month were as follows: NW = 0.71 of an inch; NE = 1.07 inches; SE = 1.18 inches, and SW = 1.09 inches. The 4-sector average for August 1996 was 1.01 inches; normal rainfall for August at Port Columbus is 3.72 inches. Most of the storms that occurred during the month were highly localized; however, the storm of August 8 produced significant rainfall over a fairly large portion of the network. The heaviest amounts were measured generally in north-eastern Franklin and western Licking Counties. Olde Gahanna received 0.7 of an inch of rain in about 20 minutes during this storm, and total rainfalls of 1.0 to 1.5 inches were common in the hardest hit areas.

Aside from the storm of August 8, conditions were generally very dry during the month. Port Columbus received measurable rainfall on only 3 days during the month; some of our observers received measurable rain on only 1 or 2 days during the month. The Palmer Drought Severity Index, which has been rather high in recent months, dropped significantly from + 2.2 (unusual moist spell) at the end of July to + 0.6 (incipient moist spell) at the end of August. Pool levels at Columbus area reservoirs also dropped during the month. End-of-month pool elevations at the various Columbus area reservoirs were as follows (with monthly changes indicated in parentheses): O'Shaughnessy = 847.47 feet (- 1.45 ft.); Hoover = 887.04 feet (- 3.69 ft.), and Alum Creek = 887.12 feet (- 0.44 ft.).

In spite of the dry conditions experienced during August, precipitation for calendar year 1996 still remains significantly above normal. Annual totals range from 30.51 inches in eastern Grandview Heights to 42.09 inches in Pickerington. Sector averages are as follows: NW = 34.22 inches; NE = 34.17 inches; SE = 34.94 inches, and SW = 37.86 inches. The 4-sector average for the year is 35.30 inches; normal precipitation at Port Columbus for the period of January through August is 26.90 inches.

NOTES:

=====

1. Daily totals shown on pages 2-8 of this report are for those volunteers who report directly to Bob Davis of Evans, Mechwart, Hambleton, and Tilton, Inc. (EMH&T), Consulting Engineers. For daily totals of other gages in network, contact Dave Cashell at ODNR / Division of Water.
2. Precipitation measurements shown on pages 2-8 are typically taken from plastic rain gages of at least 5-inch capacity.
3. The CORN logogram was designed by Steve Davies of Dodson-Stilson Associates.
4. Data for Gages 12, 14, 53, and 59 were not available at the time of publication.
