ABBREVIATIONS & SYMBOLS USED IN THIS REPORT:

=====

T Trace, an amount too small to measure.
M Missed reading; no data available.
* Missed reading; amount included
in following measurement.
e Estimated amount based on data
from nearby gages.
? Questionable value based on data
from nearby gages.
NW Northwest sector of network.
NE Northeast sector of network.
SE Southeast sector of network.
SW Southwest sector of network.
ELEV Elevation, in feet above mean sea
level.
SECT Geographic sector of network, based on
direction of equipment from Broad & High St.

The Central Ohio Raingage Network (CORN) consists of several municipal and N.O.A.A. gages combined with gages of employees or friends of the following organizations: EMH&T, Inc.; ODNR; Dodson-Stilson Assoc.; USGS/Water Resources Division; Myers-Schmalenberger, and the City of Delaware.

SUMMARY INFORMATION --- October 1996

Precipitation averaged below normal over nearly all of the Central Ohio area during October. Monthly totals ranged from 1.05 inches near Thurston / Buckeye Lake in northeastern Fairfield County to 2.50 inches in northern Powell (Delaware County). Sector averages for the month were as follows: NW = 1.77 inches; NE = 1.54 inches; SE = 1.47 inches, and SW = 1.63 inches. The 4-sector average for the month was 1.60 inches; normal precipitation for October at Port Columbus is 2.15 inches.

The first half of October was extremely dry, with only one day of measurable precipitation. The only significant storm of the month occurred during the last half of the month, on October 18. Scattered showers and thundershowers on that day produced an average of about 1 inch of rain over the Central Ohio area in a period of about 12 hours. Each of the other minor storms during the month generated less than 0.3 of an inch of rainfall.

In spite of the below-normal rainfall during October, precipitation for calendar year 1996 to date remained significantly above normal. Calendar year totals through October ranged from 35.74 inches in eastern Grandview Heights to 49.77 inches in northern Powell. Sector averages for the year were as follows: NW = 41.31 inches; NE = 41.80 inches; SE = 41.99 inches, and SW = 44.11 inches. The 4-sector average for the year is 42.30 inches; normal precipitation for the period of January through October at Port Columbus is 32.01 inches.

The October end-of-month pool levels at Columbus area reservoirs were as follows (with monthly changes indicated in parentheses): O'Shaughnessy = 848.65 feet (+ 0.03 ft.); Hoover = 881.67 feet (- 3.55 ft.), and Alum Creek = 886.23 feet (- 1.02 ft.). The Palmer Drought Severity Index for the Central Ohio area at the end of October was + 2.9 (unusual moist spell).

In closing, I would like to officially welcome our newest volunteers to CORN. Our summer and early fall recruiting effort netted approximately 15 new members, many of them employees of EMH&T, Inc. Consulting Engineers and Surveyors. That raises the total number of CORN observers to 88, as of the first week in November. And I would also like to send along best wishes and congratulations to Leslie Eyre, one of my key CORN assistants, who became Mrs. Leslie Rausch on October 12, 1996.

NOTES:

=====

1. Daily totals shown on pages 2-9 of this report are for those volunteers who report directly to Bob Davis of Evans, Mechwart, Hambleton, and Tilton, Inc. (EMH&T), Consulting Engineers. For daily totals of other gages in network, contact Dave Cashell at ODNR / Division of Water.
2. Precipitation measurements shown on pages 2-9 are typically taken from plastic rain gages of at least 5-inch capacity.
3. The CORN logogram was designed by Steve Davies of Dodson-Stilson Associates.
4. Data for Gages 21 and 34 were not available at the time of publication. Information has been received for Gage No. 14 for September and October 1996, but has not been published due to obvious technical difficulties being experienced at this location.
