* Missed reading; amount included in following measurement.	c Reading taken at 6:30 a.m.
e Estimated amount based on data from nearby gages.	

SUMMARY INFORMATION --- August 1992

Rainfall amounts for August 1992 were widely variable across the Central Ohio region due to the abundance of widely scattered thundershower activity during the month. Monthly totals ranged from 2.21 inches near Galloway to 8.80 inches near Lithopolis. A large portion of the month's rainfall occurred during the period of August 27-28, as residual moisture from the remnants of Hurricanes Lester and Andrew combined to produce between 0.9 and 3.85 inches of rain over Central Ohio. The heaviest rains during this period fell mainly over southern Delaware, eastern Franklin, southwestern Licking and northwestern Fairfield Counties. A squall line which passed through the region late in the afternoon of August 27 produced intense rainfall, hail, and a small tornado which touched down in the area of Sawmill Road north of Interstate 270. A total of 1.0 inch of rain fell in a 10-minute period at Gage No. 73 just south of Muirfield Golf Club in extreme northwestern Franklin County, and 0.5 inch of rain fell in a period of 8 minutes at Gage No. 1, just west of Don Scott Airport during this severe storm. There were several other storms during the month that also produced more than an inch of rain over smaller localized areas. Our observers at Gage No. 74 near Alexandria reported a tornado over their house on August 8.

Total annual precipitation through August 1992 is now averaging about 3 inches above normal over the Central Ohio region. The annual totals range from 24.67 inches near Galloway to 37.57 inches at Groveport and also at Reynoldsburg. A majority of gages in the network have recorded between 29 and 31 inches of precipitation so far this year. Normal annual precipitation through August at Port Columbus is 26.90 inches, based on 1961-1990 data. Only 3 gages in the network have received less than the normal 26.90 inches; two of these gages are located in southwestern Franklin County, and the other is located in Westerville.

NOTES:

=====

1. Daily totals shown on pages 2-7 of this report are for those volunteers who report directly to Bob Davis of Evans, Mechwart, Hambleton, and Tilton, Inc. (EMH&T), Consulting Engineers. For daily totals of other gages in network, contact Dave Cashell at ODNR / Division of Water.
2. Precipitation measurements shown on pages 2-7 are typically taken from plastic rain gages of at least 5-inch capacity.
3. Sectors are based on direction of gages from Broad and High Streets.
4. Possible gage malfunction at Gage #13 during the month - a verified monthly total was not available at time of publication.

The Central Ohio Raingage Network (CORN) consists of several municipal and N.O.A.A. gages combined with gages of employees or friends of the following organizations: EMH&T, Inc.; ODNR; Dodson-Lindblom Assoc., Inc. (DLA); the Hellbranch Watershed Network; Mason-deVerteuil Geotechnical Services; Stilson & Assoc., Inc.; USGS/Water Resources Division, and Medex, Inc.

This report was prepared by Robert C. Davis, Senior Hydrologist at EMH&T. The CORN logogram was designed and drawn by Steve Davies of DLA, Inc.
