ABBREVIATIONS & SYMBOLS USED IN THIS REPORT:

=====

T	Trace, an amount too small to measure.	a	Reading taken at 5:00 p.m.
M	Missed reading; no data available.	b	Readings do not compare
*	Missed reading; amount included in following measurement.		well w/neighbors gages;
e	Estimated amount based on data from nearby gages.		gage may need calibration.
NW	Northwest sector of network.		
NE	Northeast sector of network.		
SE	Southeast sector of network.		
SW	Southwest sector of network.		
C.W.	Canal Winchester.		

The Central Ohio Raingage Network (CORN) consists of several municipal and N.O.A.A. gages combined with gages of employees or friends of the following organizations: EMH&T, Inc.; ODNR; Dodson-Lindblom Assoc., Inc. (DLA); the Hellbranch Watershed Network; Mason-deVerteuil Geotechnical Services; Stilson & Assoc., Inc.; USGS/Water Resources Division, and Medex, Inc.

SUMMARY INFORMATION --- September 1994

Precipitation in September was below normal over nearly all of the Central Ohio area. Monthly totals ranged from 0.54 inch near Galloway in southwestern Franklin County to 4.00 inches just north of Pataskala in western Licking County. A significant number of volunteers in the western half of our network received less than 1 inch of rainfall during September. Gage No. 67 in south-central Delaware County reported its lowest monthly precipitation total since record-keeping began at that location in 1984 (0.71 inch). Sector averages for September were as follows: NW = 0.93 inch; NE = 1.73 inches; SE = 1.59 inches, and SW = 1.06 inches. The 4-sector average for September 1994 was 1.33 inches; normal precipitation for September at Port Columbus is 2.96 inches. The most significant storm of the month occurred during the period of September 24-27, as a large and very slow-moving upper-level low pressure system, cut off from the main jet stream pattern, produced scattered bands of showers over a 4-day period in Central Ohio. The heaviest rains fell generally on the 25th, and 4-day totals ranged from 0.06 inch in Delaware and 0.08 inch in southeastern Union County to 2.8 inches just north of Pataskala. Most of our observers in Licking County, eastern Delaware and Franklin Counties, and northwestern Fairfield County received at least 1 inch of rain over the 4-day period.

Precipitation for calendar year 1994 is now beginning to drop to below-normal amounts over parts of Central Ohio, especially the western half of the network. Yearly totals through September now range from 23.06 inches near Northern Lights Shopping Center in northeastern Columbus to 39.93 inches near Pataskala. Sector averages are as follows: NW = 27.34 inches; NE = 29.14 inches; SE = 30.16 inches, and SW = 25.54 inches. The 4-sector average through September is 28.05 inches; normal precipitation at Port Columbus for the period of January through September is 29.86 inches.

We mention "normal" precipitation in all our reports, but how "normal" is it really? As I have mentioned in past reports, the so-called "normal" precipitation values that we use were determined by calculating the average of 30 years of record, based on the period from 1961-1990. It is interesting to note that although the average precipitation for September was calculated to be 2.96 inches, none of the monthly September rainfall values during the 30 years that were used to calculate the average value was equal to 2.96 inches. In fact, only 7 of the 30 values were within 0.5 inch of that value, and less than half (13) of the values used in the calculation were within 1.0 inch of the "normal". Relative to the "normal" total annual precipitation of 38.09 inches at Port Columbus, less than half (13) of the 30 years of record used to calculate that value were within 3 inches of the "normal".

NOTES:

=====

1. Daily totals shown on pages 2-8 of this report are for those volunteers who report directly to Bob Davis of Evans, Mechwart, Hambleton, and Tilton, Inc. (EMH&T), Consulting Engineers. For daily totals of other gages in network, contact Dave Cashell at ODNR / Division of Water.
2. Precipitation measurements shown on pages 2-8 are typically taken from plastic rain gages of at least 5-inch capacity.
3. Sectors are based on direction of gages from Broad and High Streets.
4. Gages 98-A through 98-G are operated by the Village of Canal Winchester.
5. Corrections and additions to August 1994 report: Yearly total for Gage #35 should have been 26.69" instead of 226.69"; daily data for Gage #94 were received after publication of the report - the monthly total precipitation was 3.95".
6. Data for Gages 19, 49, and 51 were not available at the time of publication.
