Notes:

- Volunteers who report daily precipitation totals submit their data directly to Bob Davis or Kristi Gardner (CORN). Data for gages with monthly totals only have been obtained from Scott Kirk at ODNR / Division of Soil and Water Resources or from NWS website.
- The Central Ohio Raingage Network is a group of volunteer precipitation observers who typically report precipitation measurements taken from plastic rain gauges of at least 5-inch capacity.
- "Station I.D." nomenclature is adapted from National Weather Service (NWS) procedure for naming Cooperative Observer stations. The station is identified either by the nearest community or well-known landmark, along with a distance in miles, and direction from that community or landmark, if it exceeds approximately 1 mile. For example, Marion 2N represents a site that is approximately 2 miles north of the City of Marion. If no distance or direction is included with the station I.D., the station is located within the community, or less than 1 mile from the identified landmark.
- Gage ID numbers from 201-213 and 301-304 represent volunteers whose gages are located outside of the 10-county area officially designated by the NWS as the "Central Ohio" climatic section. The "Central Ohio" area consists of Marion, Morrow, Union, Delaware, Licking, Madison, Franklin, Fairfield, Fayette and Pickaway Counties.
- The CORN logo used on data recording sheets was designed by Steve Davies and digitized by Mike Moore.
- Copies of past CORN reports can be obtained from the CORN website, www.centralohiorain.com, or by contacting CORN Administrative staff.
- ADDITIONS - Information received after publication of the August report:

Central Ohio Significant Storm Information for Month:

Sept. 2-4: Periods of rain, occurring mainly on the 2nd and 3rd ... most of our volunteers received between 0.8 and 1.8 inches, with isolated areas around Delaware and Whitehall receiving more than 4 inches of rain. A report of 2.70" was also received from our volunteer in Lithopolis.

Sept. 11-12: Rainfall for this period ranged generally from 0.7 to 2.7 inches, with the heaviest amount being reported from near Delaware. Most of our volunteers north and west of a line from Hilliard to Utica reported at least 1 inch of rain.

Miscellaneous: At The Ponds of Summerville, South Carolina, periods of heavy rain falling between 9:35 a.m. on the 24th and 2:10 a.m. on the 25th produced a total rainfall of 5.78 inches. For the Summerville, South Carolina area, this intensity of rainfall is equivalent to only about a 10-year event. In Central Ohio, this same storm would be the equivalent of nearly a 200-year event! Many areas of South Carolina received significant rainfalls during the final week of September, which contributed to faster and greater runoff associated with the devastating rainfalls and floods of October 1-4 in South Carolina ... which will be described in more detail with the October CORN report.
