NW	Northwest sector of network		
NE	Northeast sector of network		
SE	Southeast sector of network		
SW	Southwest sector of network		
SECT	Geographic sector of network, based on direction of gauge from U.S. Route 23 (or Rt. 4 north of Marion), and U.S. Route 40.		
NWS	National Weather Service		
s	Estimated amount of water equivalent from a measured amount of snowfall.		

Notes:

- Most of our volunteers who report daily precipitation totals submit their data directly to Bob Davis. Data for gages with monthly totals only have been obtained from Scott Kirk at ODNR / Division of Soil and Water Resources or from NWS websites. Daily totals for Port Columbus and Charleston, SC Airports are obtained from NWS websites.
- The Central Ohio Raingage Network is a group of volunteer precipitation observers who typically report precipitation measurements taken from plastic rain gauges of at least 5-inch capacity.
- "Station I.D." nomenclature is adapted from National Weather Service (NWS) procedure for naming Cooperative Observer stations. The station is identified either by the nearest community or well-known landmark, along with a distance in miles, and direction from that community or landmark, if it exceeds approximately 1 mile. For example, Marion 2N represents a site that is approximately 2 miles north of the City of Marion. If no distance or direction is included with the station I.D., the station is located within the community, or less than 1 mile from the identified landmark.
- Gage ID numbers from 201-209 and 301-307 represent volunteers whose gages are located outside of the 10-county area officially designated by the NWS as the "Central Ohio" climatic section. The "Central Ohio" area consists of Marion, Morrow, Union, Delaware, Licking, Madison, Franklin, Fairfield, Fayette and Pickaway Counties.
- The intent of the precipitation tables in this report is to provide liquid equivalent amounts of precipitation that occurred in the 24 hours prior to the observation time on the date indicated in the table at each gauge site. Since the principal author of this report currently resides outside of the Central Ohio area, and does not personally experience the reported storms, it is not possible to positively confirm the dates of the storms as presented in this report. For future reference purposes, minor allowances may need to be made at times for defining actual dates of historical CORN rainfall amounts.
- Copies of past CORN reports can be obtained from the CORN website, www.centralohiorain.com, or by contacting CORN Administrative staff.
- Data for Gages 22, 33, 56, 89, 107, 111, 113, and 208 were not available at the time of publication.
- Answer to CORN Trivia question on page 8: Precipitation data was presented for a total of 121 different gauges in the January 2002 CORN report.

Central Ohio Significant Storm Information for Month:

Sept. 7-8: Scattered showers and thunderstorms tracked across the Central Ohio area from about 1 p.m. on the 7th to 4 a.m. on the 8th. Total rainfall amounts ranged from zero in the extreme southern portion of the network to 5.94 inches at Marion Municipal Airport. Amounts of 1 inch or greater were generally reported north of I-70. Rainfall was intense at times, generating flood warnings for Marion, Morrow, Delaware and Union Counties. The Marysville Airport recorded 2.50 inches of rain between 5:15 p.m. and 6:55 p.m. (1 hour and 40 minutes) on the 7th. Delaware Airport recorded 1.25 inches of rain between 6:15 p.m. and 6:55 p.m. (40 minutes). The storm system also produced an EF0 tornado in Delaware County that traveled about 3.4 miles, from 4 miles east of Delaware to 4.5 miles northwest of Sunbury. Maximum wind speeds were estimated to be about 80 miles per hour. Power outages along with downed and damaged trees were reported with the storms; no fatalities or injuries were reported.
