ABBREVIATIONS AND NOTES

T	Trace, an amount too small to measure	a	Reading taken at 9:00 a.m.
M	Missed reading; no data available	b	Reading taken at 9:15 a.m.
*	Missed reading; amount included in following measurement	c	Reading taken at 6:15 a.m.
e	Estimated amount, based on data from nearby gauges		
?	Questionable value, based on data from nearby gauges		
NW	Northwest sector of network		
NE	Northeast sector of network		
SE	Southeast sector of network		
SW	Southwest sector of network		
SECT	Geographic sector of network, based on direction of gauge from U.S. Route 23 (or Rt. 4 north of Marion), and U.S. Route 40.		
NWS	National Weather Service		
s	Estimated amount of water equivalent from a measured amount of snowfall.		

Notes:

- Most of our volunteers who report daily precipitation totals submit their data directly to Bob Davis. Data for gages with monthly totals only have been obtained from Scott Kirk at ODNR / Division of Soil and Water Resources or from NWS websites. Daily totals for Port Columbus and Charleston, SC Airports are obtained from NWS websites.
- The Central Ohio Raingage Network is a group of volunteer precipitation observers who typically report precipitation measurements taken from plastic rain gauges of at least 5-inch capacity.
- "Station I.D." nomenclature is adapted from National Weather Service (NWS) procedure for naming Cooperative Observer stations. The station is identified either by the nearest community or well-known landmark, along with a distance in miles, and direction from that community or landmark, if it exceeds approximately 1 mile. For example, Marion 2N represents a site that is approximately 2 miles north of the City of Marion. If no distance or direction is included with the station I.D., the station is located within the community, or less than 1 mile from the identified landmark.
- Gage ID numbers from 201-209 and 301-308 represent volunteers whose gages are located outside of the 10-county area officially designated by the NWS as the "Central Ohio" climatic section. The "Central Ohio" area consists of Marion, Morrow, Union, Delaware, Licking, Madison, Franklin, Fairfield, Fayette and Pickaway Counties.
- The intent of the precipitation tables in this report is to provide liquid equivalent amounts of precipitation that occurred in the 24 hours prior to the observation time on the date indicated in the table at each gauge site. Since the principal author of this report currently resides outside of the Central Ohio area, and does not personally experience the reported storms, it is not possible to positively confirm the dates of the storms as presented in this report. For future reference purposes, minor allowances may need to be made at times for defining actual dates of historical CORN rainfall amounts.
- Copies of past CORN reports can be obtained from the CORN website, www.centralohiorain.com, or by contacting CORN Administrative staff.
- Data for Gages 22, 111, 113 and 208 were not available at the time of publication.

<i>Thanks also to CORN storm spotters Cathy Peterfish, Becky Stamm and Diane Ehrbar who send alerts during significant storm events.</i>	

CENTRAL OHIO RAINGAGE NETWORK

Precipitation Report for January 2022

Prepared by Bob Davis

SUMMARY INFORMATION for January 2022

PRECIPITATION FOR MONTH:	PRECIPITATION FOR CALENDAR YEAR:
Overall Central Ohio precipitation: Averaged slightly below normal over all 4 sectors of the network.	Overall Central Ohio precipitation: Averaging slightly below normal over all 4 sectors of the network.
Range of monthly precipitation totals in Central Ohio: Low: 1.95" @ Johnstown 6ENE (Licking Co.) High: 3.63" @ Powell 2NE (Delaware Co.)	Range of annual precipitation totals in Central Ohio: Low: 1.95" @ Johnstown 6ENE (Licking Co.) High: 3.63" @ Powell 2NE (Delaware Co.)
Significant precipitation totals outside Central Ohio area: In Ohio: 0.74" @ Bryan (Williams Co.) In other States:	Significant precipitation totals outside Central Ohio area: In Ohio: In other States:
Snowfall at Port Columbus: 5.4 inches (normal snowfall for January is 9.5 inches)	Total snowfall for season (October through January) at Port Columbus: 6.5 inches (normal snowfall for October through January is 16.0 inches)

Central Ohio Sector Data	Average Precipitation for Month	Average Precipitation for Year
	(in.)	(in.)
NW Sector	2.81	2.81
NE Sector	2.69	2.69
SE Sector	2.83	2.83
SW Sector	2.56	2.56
Overall 4-sector	2.72	2.72
Normal precipitation at Port Columbus	3.00	3.00

Central Ohio Significant Storm Information for Month:

January 1-2: Precipitation fell in the form of rain, covering the period from about 1 a.m. on the 1st to 8 a.m. on the 2nd. The heaviest rains fell between 2 a.m. and 5 a.m. on the 1st, and again between 1 p.m. and 5 p.m. on the 1st. Most of our volunteers reported at least 1.0 inch of rainfall with this event. The heaviest amounts of 1.5 to 2.5 inches were reported mainly from Delaware County.

Miscellaneous: Congratulations to Jim Fry, who in calendar year 2022 is beginning his 69th year of keeping weather records (not all with CORN).

We also give our best wishes to Andy Brake, who has decided to retire from CORN after more than 33 years with our group. Andy's first data appeared in the August 1988 report!
